# Required Qualities of CI Engine fuel

- 1. Free from water and sediments
- 2. Volatile at cylinder temperature
- 3. Low self ignition temperature
- 4. Sulphur content is not more than 0.5%
- 5. Easily atomized (Viscosmy)
- 6. High heating value
- 7. Easy to handle
- 8. Economical viable

## Rating of CI Engine Fuel

- Rating of SI fuel is characteristics of fuel that determine whether fuel will knock or not under given operating conditions
- There are two method adopted for fuel rating
  - 1. Cetane number
  - 2. Diesel Index

### Cetane number

Cetane number is define as "the percentage by volume of normal cetane in mixture of normal cetane and α-methyl naphthalene which has the same ignition characteristics as the test fuel when combustion carried out in a standard engine under specified operating conditions "

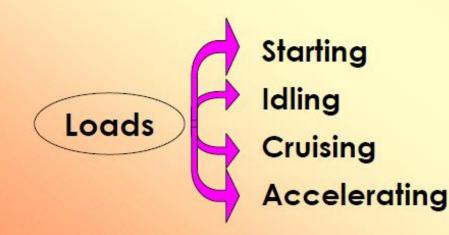

00

- Normal Cetane CN = 100
- $\alpha$ -methyl naphthalene CN = 0

#### Carburetion

The process of mixture preparation in an SI engine is called carburetion. This air-fuel mixture is prepared outside the cylinder in a device called CARBURETOR.

□ The carburetor atomizes the fuel and mixes with air in different proportions for various LOAD conditions.

2

fppt.com

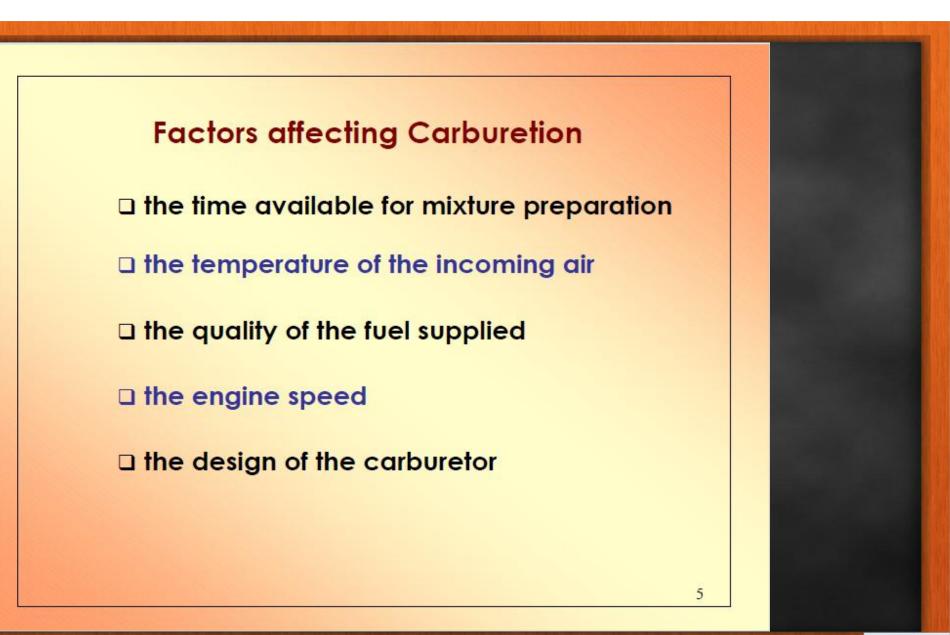

### Functions

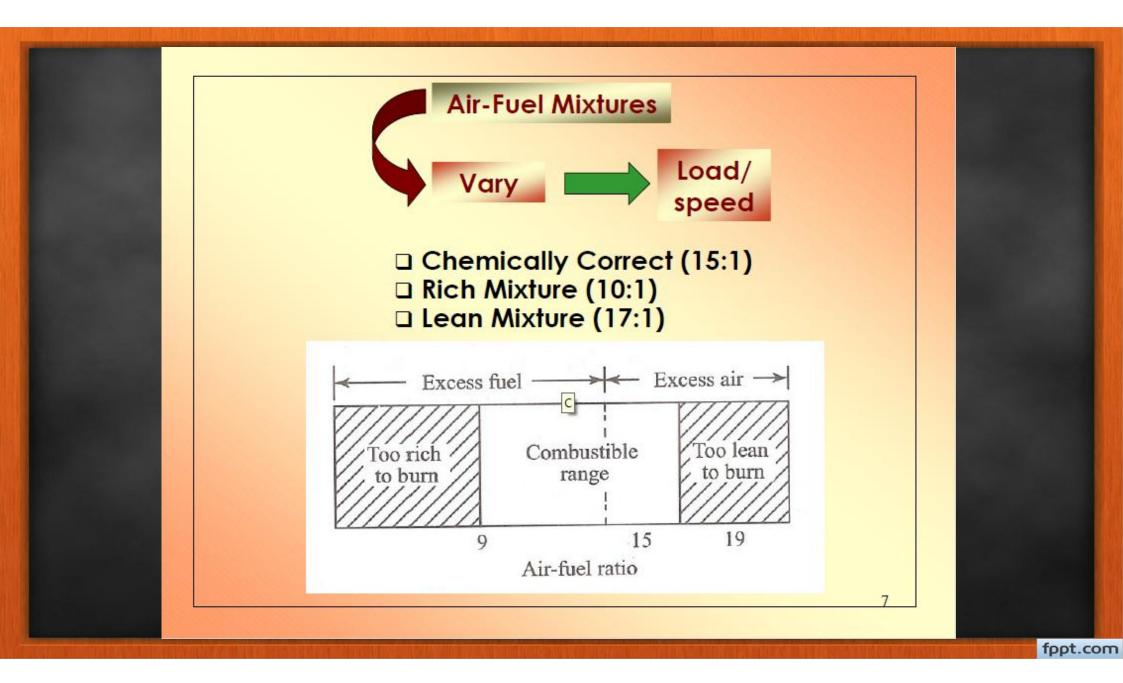

It must atomize, vaporize and mix the fuel homogeneously with air.

It must supply correct amount of airfuel mixture in correct proportion under all load conditions and speed of the engine.

It must run the engine smoothly by supplying a correct mixture strength.

4

Stoichiometric Mixture
